A visionary ecopsychologist examines the rift between human beings and nature and shows what can be done to bring harmony to both the ecosystem and our own minds. • Shows that the solution to our ecological dilemma lies in our own consciousnesses. It is becoming more and more apparent that the causes and cures for the current ecological crisis are to be found in the hearts and minds of human beings. For millennia we existed within a religious and psychological framework that honored the Earth as a partner and worked to maintain a balance with nature. But somehow a root pathology took hold in Western civilization--the idea of domination over nature--and this led to an alienation of the human spirit that has allowed an unprecedented destruction of the very systems which support that spirit. In Green Psychology Ralph Metzner explores the history of this global pathology and examines the ways that we can restore a healing relationship with nature. His search for role models takes him from shamanic ceremonies with the Lacandon Maya of Mexico to vision quests in the California desert, from the astonishing nature mysticism of Hildegard von Bingen to the Black Goddesses and Green Gods of our pagan ancestors. He examines the historical roots of the split between humans and nature, showing how first sky-god worshiping cultures, then monotheisms, and finally mechanistic science continued to isolate the human psyche from the life-giving Earth. His final chapters present a solution, showing that disciplines such as deep ecology and ecofeminism are creating a worldview in which the mind of humanity and the health of the Earth are harmoniously intertwined.

We live in an increasingly fragmented world, with islands of natural habitat cast adrift in a sea of cleared, burned, logged, polluted, and otherwise altered lands. Nowhere are fragmentation and its devastating effects more evident than in the tropical forests. By the year 2000, more than half of these forests will have been cut, causing increased soil erosion, watershed destabilization, climate degradation, and extinction of as many as 600,000 species. Tropical Forest Remnants provides the best information available to help us understand, manage, and conserve the remaining fragments. Covering geographic areas from Southeast Asia and Australia to Madagascar and the New World, this volume summarizes what is known about the ecology, management, restoration, socioeconomics, and conservation of fragmented forests. Thirty-three papers present results of recent research as well as updates from decades-long projects in progress. Two final chapters synthesize the state of research on tropical forest fragmentation and identify key priorities for future work.

Provides an excellent balance between theory and applications in the ever-evolving field of water and wastewater treatment Completely updated and expanded, this is the most current and comprehensive textbook available for the areas of water and wastewater treatment, covering the broad spectrum of technologies used in practice today—ranging from commonly used standards to the latest state of the art innovations. The book begins with the fundamentals—applied water chemistry and applied microbiology—and then goes on to cover physical, chemical, and biological unit processes. Both theory and design concepts are developed systematically, combined in a unified way, and are fully supported by comprehensive, illustrative examples. Theory and Practice of Water and Wastewater Treatment, 2nd Edition: Addresses physical/chemical treatment, as well as biological treatment, of water and wastewater Includes a discussion of new technologies, such as membrane processes

for water and wastewater treatment, fixed-film biotreatment, and advanced oxidation Provides detailed coverage of the fundamentals: basic applied water chemistry and applied microbiology Fully updates chapters on analysis and constituents in water; microbiology; and disinfection Develops theory and design concepts methodically and combines them in a cohesive manner Includes a new chapter on life cycle analysis (LCA) Theory and Practice of Water and Wastewater Treatment, 2nd Edition is an important text for undergraduate and graduate level courses in water and/or wastewater treatment in Civil, Environmental, and Chemical Engineering.

Follow the "Proven Path" to successful implementation of enterprise resource planning Effective forecasting, planning, and scheduling is fundamental to productivity—and ERP is a fundamental way to achieve it. Properly implementing ERP will give you a competitive advantage and help you run your business more effectively, efficiently, and responsively. This guide is structured to support all the people involved in ERP implementation—from the CEO and others in the executive suite to the people doing the detailed implementation work in sales, marketing, manufacturing, purchasing, logistics, finance, and elsewhere. This book is not primarily about computers and software. Rather, its focus is on people—and how to provide them with superior decision-making processes for customer order fulfillment, supply chain management, financial planning, e-commerce, asset management, and more. This comprehensive guide can be used as a selective reference for those, like top management, who need only specific pieces of information, or as a virtual checklist for those who can use detailed guidance every step of the way.

Aerobic Granular Sludge has recently received growing attention by researchers and technology developers, worldwide. Laboratory studies and preliminary field tests led to the conclusion that granular activated sludge can be readily established and profitably used in activated sludge plants, provided 'correct' process conditions are chosen. But what makes process conditions 'correct'? And what makes granules different from activated sludge flocs? Answers to these questions are offered in *Aerobic Granular Sludge*. Major topics covered in this book include: Reasons and mechanism of aerobic granule formation Structure of the microbial population of aerobic granules Role, composition and physical properties of EPS Diffuse limitation and microbial activity within granules Physio-chemical characteristics Operation and application of granule reactors Scale-up aspects of granular sludge reactors, and case studies *Aerobic Granular Sludge* provides up-to-date information about a rapidly emerging new technology of biological treatment.

Aku Dan Bunga Matahari bercerita tentang dedikasi, pengorbanan dan perjuangan cinta tanpa batas yang harus dilalui oleh sosok pria sejati bernama Andara Batubara, demi menggapai sebuah impian sederhana untuk terus bisa mencintai dan menyatu dalam ikatan cinta yang abadi dengan wanita pujaan hatinya, Elsa. Namun cinta jelas bukanlah hal yang sederhana, karena seringkali harus berliku-liku melewati prosesnya. Seperti kisah cinta Elsa dan Andara yang awalnya bertemu tidak sengaja di sebuah cafe kecil di pinggiran kota Tangerang, lantas saling jatuh cinta karena kebersamaan dan rasa nyaman yang muncul seiring dengan waktu.

Socio-legal Studies Good Press

This is a study of the management problems experienced by selected metropolitan cities in South and East Asia and of the approaches adopted in resolving them. Although the region contains many of the world's developing countries, it is not an exception to the universal trends in urbanization, which have had a massive impact on its metropolitan cities. Apart from Tokyo, the

cities concerned tend to dominate the economic and political scene in their respective countries, but for the purposes of this discussion it is not inappropriate to refer to them and the problems they face as being broadly metropolitan. Urban geographers and planners now tend to use the term 'metropolitan' to refer to a large identifiable area of continuous urbanization consisting of several administrative jurisdictions. Demographers today often classify cities with populations of more than one million people as metropolitan, and in common usage the term is widely employed to symbolize social, economic, and political status. All of these characteristics apply to the cities studied here.

For chemists and engineers in ecology, food science, pollution control, and related fields. Details the procedures available for monitoring and controlling carbon, sulfur, and nitrogen pollutants in such industries as waste water treatment, energy, transportation, pharmaceuticals, and mining. *Outlin Conflict Or Consent?* University of Chicago Press

This document describes a preliminary effluent sampling program carried out at four fish processing plants that discharge to the Fraser River and Burrard Inlet to evaluate existing data together with new, site specific data on effluent characterization to provide an estimate of contaminant loading from this industry into the lower Fraser River. Four other fish processing plants were assessed based on existing in-house data. Effluent was analyzed for physical and chemical characteristics, toxicity, volume of discharge, and discharge frequency of permitted effluents and other discharges.

What rational justification is there for conceiving of all living things as possessing inherent worth? In *Respect for Nature*, Paul Taylor draws on biology, moral philosophy, and environmental science to defend a biocentric environmental ethic in which all life has value. Without making claims for the moral rights of plants and animals, he offers a reasoned alternative to the prevailing anthropocentric view—that the natural environment and its wildlife are valued only as objects for human use or enjoyment. *Respect for Nature* provides both a full account of the biological conditions for life—human or otherwise—and a comprehensive view of the complex relationship between human beings and the whole of nature. This classic book remains a valuable resource for philosophers, biologists, and environmentalists alike—along with all those who care about the future of life on Earth. A new foreword by Dale Jamieson looks at how the original 1986 edition of *Respect for Nature* has shaped the study of environmental ethics, and shows why the work remains relevant to debates today.

Scholars consider ways in which the social movement has changed as a political form, and how it changes the societies in which it occurs. This volume contains revealing perspectives on the effectiveness of social protest.

A Compendium of Information on the Reasons for and the Development, Operations, and Results of Conserving Water and Reclaiming Land in the Western United States. Prepared by the Information Division UNEP/Earthprint

This interdisciplinary book parameterizes the global ecodynamic process. The discussion considers basic global problems of the Nature-Society-System (NSS) dynamics and reviews key problems of ensuring its sustainable development. The book includes an analysis of trends in changing ecological systems and estimates characteristics of current global ecodynamics. The authors propose a new approach to NSS numerical modelling and demonstrate the results of modelling the dynamics of this system's characteristics.

Today's Public Relations: An Introduction is a comprehensive text that features all aspects of public relations with specific sensitivity to the message strategies that challenge practitioners to be successful, yet ethical. In this book, authors Robert L. Heath and W. Timothy Coombs redefine the teaching of public relations by discussing its connection to mass communication while linking it to its rhetorical heritage. The text features coverage of ethics, research, strategy, planning, evaluation, media selection, promotion and publicity, crisis communication, risk communication, and collaborative decision making as ways to create, maintain, and repair relationships between organizations and the persons who can affect their success.

This publication has been carried out on behalf of the Great Ape

Survival Partnership (GRASP), established by UNEP and UNESCO in collaboration with a wide range of non-governmental organisations in response to growing concern over the plight of the orangutan, the chimpanzee, the bonobo and the gorilla. The report used the latest satellite imagery and data from the Government of Indonesia to assess changes in the forests of one part of south-east Asia. The results indicate that illegal logging, fires and the plantation of crops such as palm oil are intruding extensively into Indonesia's national parks, the last safehold of the orangutan. The orangutans share this habitat with a wild range of other threatened and ecologically important species including the Sumatran tiger, Sumatran rhinoceros and Asian elephant.

Anaerobic digestion is a biochemical degradation process that converts complex organic material, such as animal manure, into

methane and other byproducts. Part of the author's Wastewater Microbiology series, Microbiology of Anaerobic Digesters eschews technical jargon to deliver a practical, how-to guide for wastewater plant operators.

ERP: Making It Happen National Academies Press

This book includes twenty-one comprehensive chapters addressing various soil and crop management issues, including modern techniques in enhancing crop production in the era of climate change. There are a few case studies and experimental evidence about these production systems in specific locations. Particular focus is provided on the state-of-the-art of biotechnology, nanotechnology, and precision agriculture, as well as many other recent approaches in ensuring sustainable crop production. This book is useful for undergraduate and graduate students, teachers, and researchers, particularly in the fields of crop science, soil science, and agronomy.
