[Introduction to Prolog](#) Prolog Programming For Artificial Intelligence Divided into two parts, the first part of the book introduces the programming language Prolog, while the second part teaches Artificial Intelligence using Prolog as a tool for the implementation of AI techniques. Prolog has its roots in logic; however the main aim of this book is to teach Prolog as a practical programming tool. Prolog Programming for Artificial Intelligence (4th ... This tutorial provides introductory knowledge on Artificial Intelligence. It would come to a great help if you are about to select Artificial Intelligence as a course subject. You can briefly know about the areas of AI in which research is prospering. It also covers the implementation of AI problems using Prolog. PROLOG: Programming for Artificial Intelligence by Ivan Bratko Prolog is a declarative programming language. For example: While implementing the solution for a given problem, instead of specifying the ways to

achieve a certain goal in a specific situation, user needs to specify about the situation (rules and facts) and the goal (query). After these stages, Prolog interpreter derives the solution. Prolog in AI Prolog (PROgrammation et LOGique) is a logic programming language widely utilised in Artificial Intelligence. It is a high-level programming language which enables the user to build programs by stating what they want the program to do rather than how it should do it. Due to Prolog's grounding in first-order predicate logic it is intended to be more analogous with human deductive reasoning than other programming languages. Artificial Intelligence Programming in Prolog (AIPP) Prolog can of course also implement statistical approaches. For example, check out ProbLog, cplint and AILog 2 for probabilistic logic programming and reasoning with uncertainties. The approaches have different advantages and drawbacks: A symbolic approach is typically amenable to formal verification. The rules are explicitly available, and you can check whether they are complete, and whether they express what you intend. Artificial Intelligence with Prolog - Markus Triska Java, Python, Lisp, Prolog, and C++ are major AI programming language used for artificial intelligence capable of satisfying different needs in the development and designing of different software.
