Pharmaceutical Analysis 27 chapter cover the distribution, economic importance, conventional propagation, micropropagation, tissue culture, and in vitro production of important medicinal and pharmaceutical compounds in various species of Ajuga, Allium, Ambrosia, Artemisia, Asplia, Atractylodes, Callitris, Choisyia, Cinnamomum, Coluria, Cucumis, Drosera, Daucus, Eustoma, Fagopyrum, Hibiscus, Levisticum, Onobrychis, Orthosiphon, Quercus, Sanguinaria, Solanum, Sophora, Stauntonia, Tanacetum, Vetiveria, and Vitis. Like the previous volumes 4, 7, 15, and 21 in the Medicinal and Aromatic Plants series, the volume is tailored to the need of advanced students, teachers, and research scientists in the area of plant biotechnology and bioengineering, pharmacy, botany and biochemistry. Pharmaceutical Calculations CRC Press

The content of the book, Introduction to Pharmaceutical Analysis, has been prepared primarily in accordance to the syllabus prepared by the Pharmacy Council of India for B. Pharm 1st semester course. However, the content of the book is not limited to the syllabus only, it provides the information which are

bare necessary to understand a particular concept but beyond the syllabus. Moreover, there are two Appendices, Appendix I and II at the end. These are equally important and need to be known. One is Test solutions and the other one is for Volumetric solutions. In fact, many students do not know the difference between these solutions that are essential for analysis. How to prepare all

these solutions are mentioned there. Hence, the book would be a real helpful to all those who are associated to pharmaceutical analysis, may be during their post-graduation and during service pharmaceutical industry. The Story of a Dalit in the RSS CRC Press The constant growth of the world's population and the decline of the availability of land and soil resources are global

concerns for food security. Other concerns are the decrease in productivity and delivery of essential ecosystems services because of the decline of soil quality and health by a range of degradation processes. Key soil properties like soil bulk density, organic carbon concentration, plant available water capacity, infiltration rate, air porosity at field moisture capacity, and

nutrient reserves, are crucial properties for soil functionality which refers to the capacity of soil to perform numerous functions. These functions are difficult to measure directly and are estimated through indices of soil quality and soil health. Soil degradation, its extent and severity, can also be estimated by assessing indices of soil quality and health.

"Geospatial Technology for Land Degradation Assessment and Management" uses satellite imagery and remote sensing technologies to measure landscape parameters and terrain attributes. Remote sensing and geospatial technologies are important tools in assessing the extent and the severity of land and soil degradation, their temporal changes, and geospatial distribution in

a timely and cost-effective manner. The knowledge presented in the book by Dr. R.S. Dwivedi shows how remote sensing data can be utilized for inventorying, assessing, and monitoring affected ecosystems and how this information can be integrated in the models of different local settings. Through many land degradations studies, land managers, researchers, and policymakers

will find practical applications of geospatial technologies and future challenges.

The information presented is also relevant to advancing the Sustainable Development Goals of the United Nations towards global food security.

This two-volume set explores the aspects of diversity of micro and macro algal forms, their traditional uses; their constituents which are of value for food, feed, specialty chemicals, bioactive compounds for several

novel applications and bioenergy molecules. The industrial production systems, downstream processing, utilization of the biomass and the metabolites of importance for various applications are addressed. Innovations in production technologies, coupled with the biological activities of their novel metabolites and molecules, offer tremendous scope for the exploitation of

these micro and macro algal forms through industrial production processes in a sustainable manner. These two volumes offer a treasure house of information to the students and researchers of plant sciences, biological sciences, agricultural sciences, foods and nutrition sciences, health sciences and environmental sciences. Their practical value will

benefit professionals including agriculture and food experts, biotechnologists, ecologists, environmentalists, and biomass specialists. This set will also aid industries dealing with foods, nutraceuticals, pharmaceuticals, cosmeceuticals health care products, and bioenergy. *An Intimate Note to the Sincere Seeker* John Wiley & Sons This book breaks new ground in the

study of Dalit Literature, including in its corpus, a range of genres such as novels, autobiographies, pamphlets, poetry, short stories as well as graphic novels. With contributions from major scholars in the field, it critically examines Dalit literary theory and initiates a dialogue between Dalit writing and Western literary theory.

This book, Experimental Pharmaceutical Organic Chemistry, is meant for D. Pharm and B. Pharm students. The book has been prepared in accordance with the latest syllabi of pharmacy courses. Chemistry is a fascinating branch of science. Practical aspects of chemistry are interesting due to colour reactions, synthesis of drugs, analysis and observation of beautiful crystal development. The important aspects involved in the practicals of pharmaceutical organic chemistry have been comprehensively covered in the book and the subject matter has been organized properly. The language is easy to understand. I hope the students studying pharmaceutical chemistry would be benefitted from this book. In the book, general and specific safety notes in detail are provided followed by explanation of common laboratory techniques like glassware handling, heating process,

crystallization, filtration, drying, melting & boiling point, chromatography etc. A number of equipments, apparatuses and glass wares used in a pharmaceutical chemistry lab are also provided with diagrams. Specific qualitative methods for estimation of elements, functional groups and some individual compounds have been described. Derivative preparation of some organic compounds is presented to further confirm the presence of a particular compound. Syntheses of different organic and pharmaceutical compounds with chemical reaction have also been given. It is my belief that this book will cater to the needs of the Diploma and undergraduate pharmacy students during their study as well as after completion of their course. Constructive comments on the content and approach of the book from the readers will be highly appreciated.
