Readings about The Social Animal Prentice Hall

Renowned social psychologists Carol Tavris and Elliot Aronson take a compelling look into how the brain is wired for self-justification. When we make mistakes, we must calm the cognitive dissonance that jars our feelings of self-worth. And so we create fictions that absolve us of responsibility, restoring our belief that we are smart, moral, and right--a belief that often keeps us on a course that is dumb, immoral, and wrong.

Mistakes Were Made (but Not by Me) Third Edition Oxford University Press, USA

What does it mean to be human? Why do we feel and behave in the ways that we do? The classic answer is that we have a special kind of intelligence. But to understand what we are as humans, we also need to know what we are like motivationally. And what is central to this story, what is special about human motivation, is that humans want to share with others their inner experiences about the world--share how they feel, what they believe, and what they want to happen in the future. They want to create a shared reality with others. People have a shared reality together when they experience having in common a feeling about something, a belief about something, or a concern

about something. They feel connected to another person or group by knowing that this person or group sees the world the same way that they do--they share what is real about the world. In this work, Dr. Higgins describes how our human motivation for shared reality evolved in our species, and how it develops in our children as shared feelings, shared practices, and shared goals and roles. Shared reality is crucial to what we believe--sharing is believing. It is central to our sense of self, what we strive for and how we strive. It is basic to how we get along with others. It brings us together in fellowship and companionship, but it also tears us apart by creating in-group "bubbles" that conflict with one another. Our shared realities are the best of us, and the worst of us.

Attitudes - cognitive representations of our evaluation of ourselves, other people, things, actions, events, ideas - and attitude change have been a central concern in social psychology since the discipline began. People can - and do - have

attitudes on an infinite range of things but what are attitudes, how do we form them and how can they be modified? This book provides the student with a comprehensive and accessible introduction to the basic issues in the psychological study of attitudes. Drawing on research from Europe and the USA it presents up-to-date coverage of the key issues that will be encountered in this area, including attitude formation and change, functions of attitudes, attitude measurement, attitudes as temporary constructs, persuasion processes and prediction of behaviour from attitudes.

Changing the Stories We Live By Prentice Hall
On April 20, 1999, the halls of Columbine High School in Littleton, Colorado, reverberated with the sound of gunshots as two students, highly armed and consumed with rage, killed thirteen students and seriously injured twenty-three before turning the guns on themselves. It was the worst school massacre in our nation's history. Can we prevent a tragedy like this from happening again? In Elliot Aronson's *Nobody Left to Hate*, on of

our nation's leading social psychologists argues that the negative atmosphere in our schools--the exclusion, taunting, humiliation, and bullying--played a major role in triggering the pathological behavior of the shooters. At the very least, such an atmosphere makes schools an unpleasant experience for most normal students. But it doesn't have to be. *Nobody Left to Hate* offers concise, practical, and easy-to-apply strategies for creating a more supportive, stimulating, and compassionate environment in our schools. Based on decades of scientific research and classroom testing, these strategies explain how students can be taught to control their own impulses, how to respect others, and how to resolve conflicts amicably. In addition, they show teachers how to structure classes to promote cooperation, rather than competition, without sacrificing academics. On the contrary, education is greatly enhanced. For parents, teachers, or anyone concerned with what is happening in our schools, *Nobody Left to Hate* provides a simple and effective plan of

action that will make their children's school not only a safe place, but a more humane place of learning. [Applied Social Psychology](#) W. W. [Attitudes and Attitude Change](#) SAGE Publications How does a boy from a financially and intellectually impoverished background grow up to become a Harvard researcher, win international acclaim for his groundbreaking work, and catch fire as a pioneering psychologist?

As the only person in the history of the American Psychological Association to have won all three of its highest honors—for distinguished research, teaching, and writing—Elliot Aronson is living proof that humans are capable of capturing the power of the situation and conquering the prison of personality. A personal and compelling look into Aronson's profound contributions to the field of social psychology, *Not by Chance Alone* is a lifelong story of human potential and the power of social change.

Applying Social Psychology Cambridge University Press

'I think this is a wonderful book. The social psychological theories are exceptionally well presented for practical use. Anyone studying social psychology will find this book extremely relevant and accessible' - Gerjo Kok, Professor of Applied Psychology, Department of Work and

Social Psychology, Maastricht University
 'This is a highly readable book dealing with an exciting topic, applied social psychology, which is at the heart of many urgent problems of the new millennium. It is well suited for curing the disease of those who still believe there is an opposition between fundamental and applied research, between theories and practice. The major asset of this volume lies in the originality and strength of the PATH concept -- from problem definition, over analysis, and test, to helping. I like the idea to implement and institutionalize this framework in teaching and in education' - Klaus Fiedler, University of Heidelberg
 Introducing a new methodological approach for doing applied psychology, the PATH model, this book offers a simple,

systematic, step-by-step, easy-to-use methodology for applying primarily social psychological theory to a wide range of social problems, from tackling crime and prejudice to fostering environmental conservation and team performance. It helps and guides students to define a problem, conduct a theory-based analysis, develop an explanatory model, set up and execute a research project to test the model, and develop an intervention. Applying Social Psychology is a highly practical text, which can be used by introductory and advanced level students who want to learn how to analyze practical problems and develop solutions for these problems based upon social psychological theory and research.

Written in an engaging and accessible way, this book offers: 1. A new methodological model put forward by the authors (PATH model); 2. Real world case studies; 3. End of chapter exercises; 4. Interviews with leading social psychologists; 5. Glossary of key theories and concepts in social psychology; 6. Recommended further reading.
