Rebuild your American Motors Corporation (AMC) V-8 engine with help and guidance from Don's Auto Parts & Machine Shop, which is located in Kenosha, Wisconsin, the home of American Motors! The AMC Gen II and Gen III V-8 family consists of 290-, 304-, 343-, 360-, 390-, and 401-ci

engines. Manufactured in Kenosha, Wisconsin, these engines reside between the fenders of classic cars (such as the AMC Javelin, AMX, Gremlin, AMC Rebel Machine, Matador, and Rambler and SC/Rambler) as well as Jeep CJs and full-size Jeeps. If this is your first time rebuilding an AMC engine, this book contains detailed photos and instructions beginning with disassembling your engine and determining the machining that will be needed. All of the fine details about boring and honing, crankshaft grinding,

balancing, cylinder head rebuilding, engine assembly, oil modifications, and performance upgrades are detailed with photos. Many of the specialized machining steps that are needed for a performance build that your local machine shop might not know about are included in this book. AMC V-8 Engines: Rebuild & Modify not only shows the steps of a rebuild in detail but also helps you determine what kind of build is right for your project. It will assist you in making the correct decisions on compression ratio, camshaft selection, and which performance parts are needed. Many engine replacement parts are getting hard to find, so this book reveals some of the aftermarket and restoration companies that specialize in remaking AMC engine parts. Items such as camshafts, forged pistons, connecting rods, and cylinder head manufacturers are covered. Get ready to rebuild your AMC V-8. We look forward to helping you along the way!

A high-impact leadership coach gives you the tools you need to maximize your influence in a new role, giving you the ability to meet any challenge and take your team, organization, church, or company to new heights. "A practical path to maximizing your influence, navigating transitions, and producing positive results."—Jon Gordon, 10x bestselling author of *The Power of Positive Leadership* Sure, it's inspirational when we hear stories about those who founded companies from their garages with one hundred dollars cash while in high school.

But such success is super rare and not always how it plays out for great leaders. The reality is that most leaders are responsible for corporations, teams, and products they didn't launch from the ground up. Tyler Reagin saw the immense need to address this mission-critical but often overlooked aspect of leadership: healthy transition for leaders who inherit teams, places, or platforms others created. His groundbreaking book *Leading Things You Didn't Start* provides a faith-based four-step plan that answers practical questions such as: • Do I really want to take over something loved by so many? • Is there a secret sauce to doing what the leaders before me did? • How do I get the current team on board with my leadership? • How do I honor the past without being trapped by it? • How do I steward the legacy of the leaders who started the movement? Through the use of tried-and-true coaching principles and practical case studies with leaders like Buzz Williams, head coach at Texas A&M, and Cheryl Bachelder, former CEO of Popeyes, Reagin helps you maximize your newfound influx of influence and master the intentions of an inheriting leader.

How to Rebuild the Small-Block Mopar
Small-block Chrysler, Plymouth, and Dodge V-8 engines came in a variety of vehicles since 1964. These powerful, durable engines powered everything from high-performance 'Cudas and Chargers to torquey Dakotas and Ram trucks. "How to Rebuild the Small-Block Mopar" is the most comprehensive book on small-block Mopar engines ever released, covering 273, 318, 340, and 360-ci LA engines and 5.2 and 5.9L Magnum V-8s. Author William Burt uses color photos and descriptive text to teach readers the complete rebuild process from removal to break-in. This book describes ways to increase the performance and efficiency of your small-block Mopar, and also points out the unique steps required for LA and Magnum versions of the engine. Topics covered include removal, tear down, inspection, selecting parts, machine-shop work, and assembly. Special sidebars cover torque sequences, cc-ing heads, calculating compression ratio, and painting engine parts.

The nature of representation is a central topic in philosophy. This is the first book to

connect problems with understanding representational artifacts, like pictures, diagrams, and inscriptions, to the philosophies of science, mind, and art. Can images be a source of knowledge? Are images merely conventional signs, like words? What is the relationship between the observer and the observed? In this clear and stimulating introduction to the problem John V. Kulvicki explores these questions and more. He discusses: the nature of pictorial experience and "seeing in" recognition, resemblance, pretense, and structural theories of depiction images as aids to scientific discovery and understanding mental imagery and the nature of perceptual content photographs as visual prostheses. In so doing he assesses central problems in the philosophy of images, such as how objects we make come to represent other things, and how we distinguish kinds of representation - pictures, diagrams, graphs - from one another. Essential reading for students and professional philosophers alike, the book also contains chapter summaries, annotated further reading, and a glossary.
